## When glass becomes pure light

*Zephyr and Criosfera: a continuous dialogue  
between technology and craft*

**Zephyr and Criosfera** reveal the **expressive potential of glass**.

Through texture, transparency and advanced research, both collections transform craftsmanship into performance, shaping a soft and controlled light diffusion while giving each product a strong and distinctive presence.

Now also available in a **2700K version**, they offer an even warmer light quality, enhancing atmosphere and visual comfort.

## Zephyr

Designed by **Carlo Colombo**, Zephyr reinterprets the classic **chandelier** with a **contemporary language**. Its hand-blown glass diffusers, textured with alternating transparent and opaline stripes, create a soft, glare-free diffusion of light. With its refined presence and elegant performance, Zephyr brings a sophisticated atmosphere to both residential and contract interiors.

## Criosfera

Designed by **Giulia Foscari**  
**UNA / UNLESS**, Criosfera draws inspiration from the **ice core**, a natural archive of the Earth's climate history. Layers of recycled blown glass and an optical core evoke the stratification of polar ice, transforming light into a **manifesto of awareness, beauty and responsibility** for the future.
